

## Why Choose a Union Ironworker Contractor for Your PEMB Project

### PEMB Projects Demand Precision

Pre-engineered metal buildings rely on tight tolerances, engineered connections, and fast-track schedules. Steel erection sits on the critical path—any delay or mistake impacts every trade that follows.

### Highly Trained Workforce

Union ironworkers complete formal apprenticeship programs and continuous upgrade training. They bring PEMB-specific experience, drawing comprehension, bolting accuracy, and certified rigging and fall protection skills to every project.

### Schedule Reliability

Experienced, properly staffed crews understand PEMB sequencing and execute efficiently. Faster erection and fewer corrections mean earlier enclosure and predictable project timelines.

### Safety & Risk Management

Union contractors maintain industry-leading safety programs. Lower incident rates reduce shutdowns, claims, and liability exposure—protecting both schedule and budget.

### Accountability & Professionalism

Core Field Erectors LLC is fully insured, bonded, and signatory. Our crews arrive prepared, supervised, and accountable—no labor brokers, no uncertainty.

### Quality That Lasts

Correct bolt torque, alignment, and bracing protect the structural integrity of your building, manufacturer warranties, and long-term performance.

### Bottom Line

**Union ironworkers deliver certainty—on safety, schedule, and quality.**

When the steel goes up right the first time, everything else falls into place.
